

**Energy Climate Action Day: Wednesday, February 5**

# Get Energized

**Did you know?** In New York City, energy use in buildings is the largest source of greenhouse gas emissions that overheat and pollute our planet. By taking simple actions like turning off lights and unplugging appliances when not using them, we can make a real impact!

Join us on February 5 to explore ways to save energy at school and beyond.

## Two Ways NYC Public Schools Are Reducing Energy- Related Emissions:

### 1 Switching to Clean, Renewable Energy

100 solar projects have been installed on school buildings, with more on the way.

### 2 Improving Efficiency

Lighting and mechanical systems are being upgraded to use less energy.
